Dear Paul,

Lack of awareness of sustainability concepts, high implementation costs, lack of funds for green projects, etc. The barriers for manufacturers to move towards greener processes are real. But just as much as enablers and concrete benefits for the community and the industry.

The commitment of DIMOFAC to help factories transition to Industry 4.0 and now Industry 5.0 not only means reaching higher productivity and quality through digitalisation, it is also about leveraging the power of technology to put back people and their environment at the centre.

Reducing the

Ensuring safe

Collaboration

Gender gap in Manufacturing

"We associate manufacturing with men and we see it as a boring field"...but it's not the case.

Women from the industrial and research fields discuss their views to make our workplaces more diverse.

Human-Robot Cooperation

In the past, safety meant that factory operators would never come close to robots. Today's factory looks much different, robots and workers and working hand in hand in many tasks. But this also entails new concerns and regulations.

Researchers & Manufacturers

An innovation is only as good as its bridge to the established technology. The transformation towards Industry 4.0 needs to be guided. And this means improving understanding between manufacturers and researchers.
