Dear Paul,

In 2019, according to Eurofound, nearly 4 European industrial companies out of 10 reported that their production was limited by labour shortages.

As it seems, the manufacturing sector is having a hard time attracting young minds. This is an ironical assessment when considering that more than 90% of the objects we use in our daily lives are manufactured in an industrial way.

Join our webinar **"Young generations & Manufacturing: an insurmountable gap?"** on Tuesday 15 November at 10:30 CET to discuss what is at stake!

High-Mix Low-Volume

Plug & Produce
 Modules

Manufacturing
 Monitoring
 Systems

Can you reconfigure your processes fast enough to not face any delays?
Can you maintain low levels of waste when doing so?
Can you still guarantee optimal quality for your products?

→ [Take the test!](#)

Production modules for milling, assembling, welding, packaging, etc. that you can just plug...and unplug from a manufacturing process depending on what you are producing? Check out the DIMOFAC P&P modules!

→ [Read more](#)

Can you imagine quality assurance processes that can automatically eject faulty products from a process and on the other hand also correct the parameters of a machine to start producing well again? It's possible!
